Vehicles shown are from the Land Rover Global range. Specifications, options and availability will vary between markets and should be verified with your local Land Rover Retailer. The figures provided are official EU Test Figures. For comparison purposes only. Real world figures may differ.

All figures are manufacturer's targets and subject to final confirmation ahead of production. Note that CO<sub>2</sub> and fuel economy figures can vary according to wheel fitment, and the lowest figures may not be achievable with the standard wheels.

WLTP is the new official EU test used to calculate standardised fuel consumption and CO<sub>2</sub> figures for passenger cars. It measures fuel, energy consumption, range and emissions. This is designed to provide figures closer to real-world driving behaviour. It tests vehicles with optional equipment and with a more demanding test procedure and driving profile.

The figures provided are NEDC2 calculated from official manufacturer's WLTP tests in accordance with EU legislation. For comparison purposes only. Real world figures may differ. CO<sub>2</sub> and fuel economy figures may vary according to wheel fitment and optional extras fitted. NEDC2 are figures calculated using a Government formula from WLTP figures equivalent to what they would have been under the old NEDC test. The correct tax treatment can then be applied.
